SUMMARY

Software developer with 2+ years delivering cross-platform apps for Android, iOS, and Web. Shipped 3 enterprise productions apps (LIMS/CRM, e-commerce, Billing software) with BLoC architecture, Firebase, REST APIs, and payment integration. Known for clean architecture, performance optimisation, and mentoring junior developers.

WORK EXPERIENCE

Software Developer · Revol Software Solutions Pvt Ltd.

Jan 2024 – Present

- Delivered 2 production Flutter apps (LIMS & CRM, E-Commerce) serving enterprise clients in an Agile team of 3.
- Built a JSON-driven dynamic form engine for LIMS, cutting form-creation time by ~40% and eliminating hardcoded UI.
- Integrated Firebase Cloud Messaging (FCM) push notifications across both apps, achieving >98% delivery rate in production.
- Implemented BLoC state management architecture, reducing UI rebuild cycles by ~35% and improving app responsiveness.
- Optimised app startup time by 25% via lazy loading, image caching, and Flutter DevTools profiling.
- Achieved 90%+ widget test coverage on core modules using flutter_test and mockito; cut post-release bug reports by 30%.
- Mentored 2 junior developers through code reviews, enforcing clean architecture and MVVM patterns.

PROJECTS

- LIMS & CRM:** Enterprise mobile app with JSON-driven forms serving 500+ users across 3 client orgs. (Flutter · BLoC · Dynamic Forms · FCM · REST API)
- E-Commerce:** Full-featured shopping app with cart, order tracking, payment gateway; <2s cold-start on mid-range Android. (Flutter · BLoC · Razorpay · Firebase Auth · FCM)
- NihonGo:** Japanese learning app with spaced-repetition logic for personal JLPT N5 preparation. (Flutter · Firebase Auth · Google Sign-In)
- Basutei:** Real-time bus tracker with sub-2s live location updates via Firebase RTDB streams. (Flutter · Firebase Realtime Database)
- GemsBill:** Developed a full-stack billing and inventory management application for a jewelry business, featuring invoice generation, advance booking management, customer records, and real-time data synchronization. (Flutter · Firebase · FastAPI · Pydantic)
- SP Food Corps:** Built a full-stack billing and customer management system for a catering service, including master data management, customer tracking, invoice generation, and reporting functionalities. (Flutter · Firebase · FastAPI · Pydantic)

ACHIEVEMENTS

- Solo-built and delivered 2 production billing apps (jewellery shop & catering service) end-to-end — Flutter frontend (BLoC, MVVM, Clean Architecture) + Python backend (FastAPI, Pydantic) hosted on Render.
- Each app covers master data management, customer records, and a settings screen for configuring invoice layout, business details, and tax rates.
- Invoice generation handled by a FastAPI microservice — accepts structured data via REST, renders PDF invoices using Pydantic-validated models, and returns download-ready output to the Flutter client.
- Both apps are in active daily use, replacing manual paper-based billing and reducing invoicing time by ~60%.

TECHNICAL SKILLS

Languages: Dart, Python

Frameworks: Flutter (Android · iOS · Web), FastAPI

State Mgmt: BLoC, Provider, Riverpod

Backend/DB: Firebase (Firestore, RTDB, Auth, FCM), REST APIs

Architecture: Clean Architecture, MVVM, Repository Pattern

Testing: flutter_test, mockito, widget & unit tests

Tools: Android Studio, Git, GitHub Actions (CI/CD), Flutter DevTools, Agile/Scrum

EDUCATION

B.E. Computer Science Engineering ·

Einstein College of Engineering, Tirunelveli | Anna University

CGPA: 7.71 | 2020 – 2024

LANGUAGES

Tamil (Native)

English (Professional Working Proficiency)

Japanese (Elementary — JLPT N5 Preparation)
